DAP Driver Awareness Panel

The Driver Awareness Panel (DAP) makes drivers more aware of their driving style. It's an in cab "on the job" driver's aid. It saves fuel and achieves direct / instantaneous improvements. DAP actively monitors the vehicle CANbus and analyses the data. DAP then calculates and compares the data against embedded known fleet and vehicle performance standards, and when appropriate, it signals good or bad driving behaviour in real-time to the driver.

Key Features

- Designed not to intrude into the drivers work space
- A tool to assist the fleet managers and encouraging his drivers to driver responsibly
